

# TABLE

Your tab, at your table

# The Problem

Point of sale payment systems have made the payment system smoother with Apple Pay

Restaurants have been unABle to do that

**Mission statement:**

**Paying your tab from your pocket**

# The solution

A payment system for customers to use their phones to pay in a restaurant

Creating the TABLE application allows the customer to pay with their saved credit card or Apple Pay

# Our Team

**DJ Presser**

Chief Executive Officer,  
B.S. Computer Science,  
Columbia University

**Aliza Isaacs**

Chief Technology Officer,  
B.A. Computer Science,  
Barnard College

**Noah Rapoport**

Intern (Operations), B.S.  
Computer Science,  
Columbia University

**Gaby Yusupov**

Chief Design Officer,  
B.A. Computer Science,  
Barnard College

# How it works

## Step 1

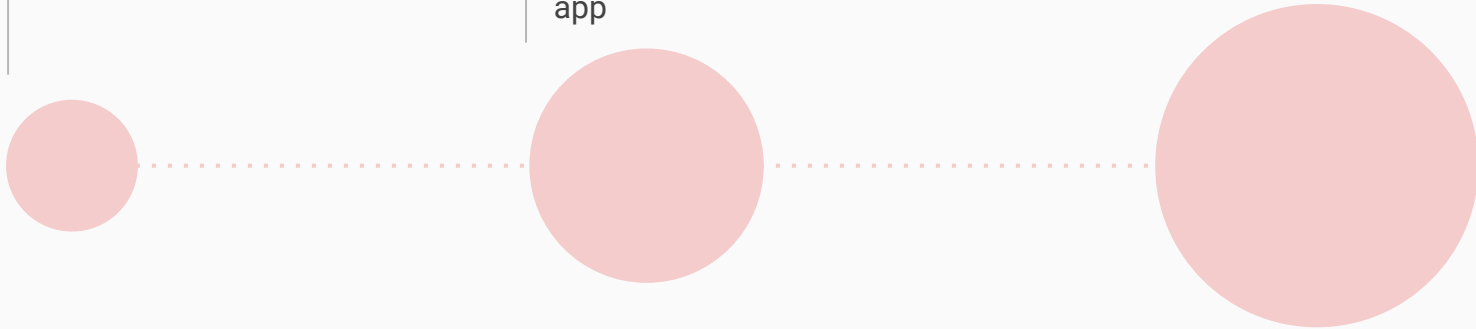

Customer orders and enjoys their meal

## Step 2

Waiter uploads the customer's order to the restaurant-facing TABLE app

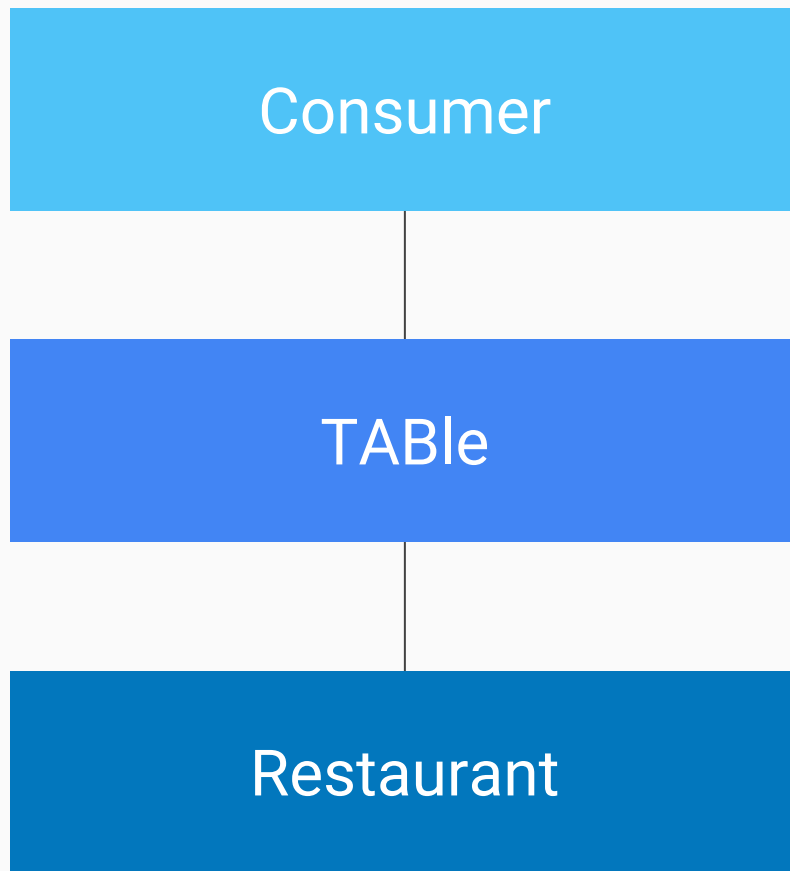

## Step 3

Customer pays their tab through the customer-facing TABLE app

# Revenue model

Users pay for their meals through the app, with a small percentage of the transaction going to TABLE

# Moving Forward with TABle

- All-in-one interface for waiters to send in orders and to track payment
- Hassle-free split payment with friends
- Improve user interface, complete with custom logo
